

s : position

$$y = s(t)$$

slope of $s(t)$, $s'(t)$

$$\frac{\Delta s}{\Delta t} \rightarrow \text{velocity, } \underline{\underline{v(t)}}$$

"movement \rightarrow velocity"

$y = a(t)$
positive
velocity

vector \leftarrow velocity has direction
scalar speed doesn't have
direction

up \uparrow
RT. \rightarrow

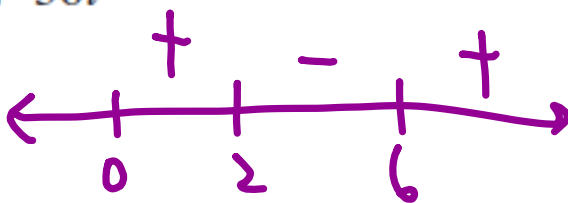

slope of $v(t)$, $v'(t)$

$$\frac{\Delta v}{\Delta t} = \text{acceleration, } a(t)$$

accel. \rightarrow changes velocity

- (a) Find the velocity at time t . $v(t) = f' = 3t^2 - 24t + 36$
- (b) What is the velocity after 3 s? $v(3) = -9$
- (c) When is the particle at rest? $v(t) = 0 = 3t^2 - 24t + 36, t = 2$
- (d) When is the particle moving in the positive direction?
- (e) Find the total distance traveled during the first 8 s.
- (f) Draw a diagram like Figure 2 to illustrate the motion of the particle.
- (g) Find the acceleration at time t and after 3 s.
- (h) Graph the position, velocity, and acceleration functions for $0 \leq t \leq 8$.
- (i) When is the particle speeding up? When is it slowing down?

1. $f(t) = t^3 - 12t^2 + 36t$

d) $v(t) > 0$ 

$[0, 2) \cup (6, \infty)$

t	f
0	0
2	32
6	0
8
