

Complex numbers in
polar coordinate system
 $2+3i = \bar{z}$

Plot z .

$$|2+3i| = \sqrt{2^2+3^2}$$

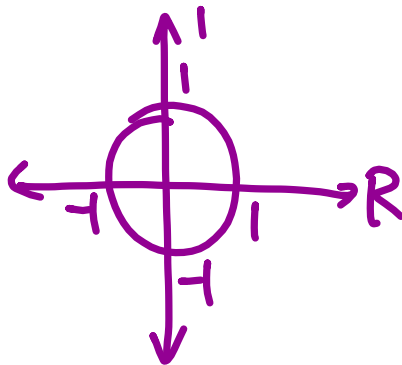

$$= \sqrt{13}$$

$$|x| = 1$$

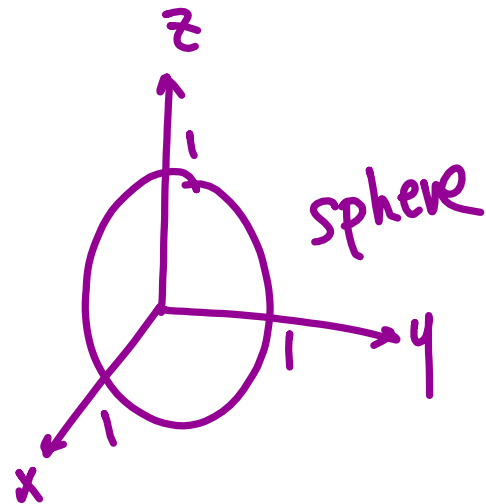

$$|z| = 1$$

$$* z = a+bi$$

$$|v| = 1$$

$$* v = a_1i + a_2j + a_3k$$

$$\text{Let } z = 6 - 2i$$

$$* \bar{z} = 6 + 2i$$

$$z \cdot \bar{z} = |z|^2$$

$$\text{Find } |z| = \sqrt{40}$$

$$= \sqrt{6^2 + 2^2}$$

$$= \sqrt{(6 + 2i)(6 - 2i)}$$

$$= \sqrt{z \cdot \bar{z}}$$

Find (a, b) where
 $z = a + bi$.

$$a = 5\sqrt{3} = 10 \cos 30^\circ$$

$$b = 5 = 10 \sin 30^\circ$$
